## Fertilizer Recomentation **System for Disease Prediction**

Agriculture is the most important sector in today's life. Most plants are affected by a wide variety of bacterial and fungal diseases. Diseases on plants placed a major constraint on the production and a

major threat to food security. Hence early and accurate identification of plant diseases is essential to ensure high quantity and best quality. In recent years, the number of diseases on plants and the degree of harm caused has increased due to the variation in pathogen varieties, changes in cultivation methods, and inadequateplant protection techniques.

## Before you collaborate A little bit of preparation goes a long way with this session. Here's what you need to do to get going. A Team gathering Define who should participate in the session and send an invite. Share relevant information or pre-work ahead. Set the goal Think about the problem you'll be focusing on solving in the Learn how to use the facilitation tools Use the Facilitation Superpowers to run a happy and productive
